## Abstracts

Double drive sprocket is a mechanical transmission component used in conjunction with a chain to transmit power. This sprocket design is used to mesh with two single row chains, providing higher transmission efficiency and stability than a single sprocket. Lund dual drive sprockets are usually made of high-quality carbon steel, and the teeth are quenched to improve strength and wear resistance. The dual drive sprocket can be used together with the chain tensioner to adjust the tension of the chain and ensure the stable operation of the transmission system.

The global Double Drive Sprocket market size was estimated at USD 481.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
