Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double-effect Falling Film Evaporator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A double-effect falling film evaporator is an evaporation device that utilizes secondary steam for reheating. It achieves evaporation and concentration by passing the solution through the inner wall of a heated tube in a thin film. It offers advantages such as low energy consumption, high efficiency, and a small footprint. This type of equipment is commonly used to process heat-sensitive materials and is widely used in the food, chemical, and pharmaceutical industries. Upstream processing primarily includes stainless steel sheets, alloy pipes, welding and sealing materials, automatic control components, sensors, pumps, and valves, among other basic equipment. The quality, corrosion resistance, and processing precision of these raw materials directly impact the reliability and service life of the equipment. Downstream processing primarily finds application in industries such as food, bioengineering, pharmaceuticals, and chemicals, where it is used for low-temperature vacuum evaporation and concentration of liquids or solvent recovery, particularly for materials that do not crystallize during the evaporation process. Global sales in 2024 are expected to be approximately 3,800 units. Equipment prices are influenced by factors such as processing capacity, evaporation rate, material, inclusion of an MVR system, degree of automation, and customization. The average price per unit ranges from US\$30,000 to US\$100,000. Industry gross profit margins are in the 15%-30% range.

The global Double-effect Falling Film Evaporator market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
