In 2024, global sales of double-flange level transmitters reached 1.26 million units, with an average selling price of \$820 per unit. Double-flange level transmitters are industrial instruments that indirectly measure the level of liquid media using the differential pressure measurement principle. They are suitable for high-temperature, high-pressure, or closed-vessel level monitoring in industries such as chemical, petroleum, metallurgy, power generation, pharmaceuticals, and water treatment. Key upstream raw materials include stainless steel (316L/304), silicon piezoresistive chips, welding flanges, sealing gaskets, pressure-conducting tubes, and signal circuit modules. Key suppliers include Baosteel, Hitachi Metals, ABB Sensors, Honeywell, and Sensata. Global production capacity is approximately 1.8 million units per year, with an average industry gross profit margin of approximately 32%. In the downstream consumption structure, the chemical and energy industries account for approximately 41%, water treatment and environmental protection systems for 26%, metallurgy and power generation for 20%, and pharmaceuticals and food for 13%. Stainless steel and electronic components account for approximately 62% of the total upstream raw material cost. In the future, this product will develop in the direction of digitalization, wireless remote transmission, intelligent diagnosis, and corrosion and earthquake resistance, and will be widely used in smart factories and Industry 4.0 automation systems.
