Report Overview

A double glazing unit is a combination of two panes of glass spaced apart with a spacer bar and sealed with a primary and secondary sealant to form a single airtight unit with an air space in between.

By combining two sheets of glass, we can offer solutions to a range of different problems. These can include keeping the heat in your rooms, stopping unwanted excessive heat from the sun, keeping noise out or making your home more secure.

The basic function is possible thanks to a transparent coating on one surface of the glass which reflects heat back into the building, thereby reducing heat loss through the window.
