Abstracts

A double gun DC charging pile is a type of electric vehicle (EV) charging infrastructure that enables two vehicles to charge simultaneously using direct current (DC) fast-charging technology, typically through two separate connectors or "guns" attached to a single charging unit. These systems are designed to optimize space and operational efficiency at charging stations by reducing the need for multiple standalone chargers, while providing high-power output—often ranging from 50 kW to 350 kW or more—to significantly shorten charging times compared to alternating current (AC) alternatives. They are commonly deployed in public and commercial settings such as highway rest stops, fleet depots, and urban charging hubs, where demand for rapid, high-throughput charging is growing in parallel with the expansion of the global EV market.

The global Double Gun Dc Charging Pile market size was estimated at USD 5280.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 24.50% during the forecast period.
