Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double Head Laser Wire Stripping Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of double-head laser wire stripping machines will reach 17,753 units, with an average selling price of US\$13,800 per unit. The double-head laser wire stripping machine is a device that uses a dual laser optical path structure to perform high-precision non-contact stripping of wire materials such as wires and cables. It has two independent or collaborative laser emission units, which can efficiently strip the insulation layer of both ends or different parts of the wire at the same time. This equipment usually uses ultraviolet or infrared lasers, and through precise control of laser power, focal length and motion path, it can quickly and neatly strip the outer insulation or inner shielding of different types of wires (such as multi-core wires, coaxial wires, flat cables, etc.), without mechanical stress and without damaging the copper core. It is widely used in precision electronics, medical equipment, aerospace, automotive wiring harnesses and other fields that have extremely high requirements for wire stripping quality and efficiency. As high-precision, non-contact wire and cable processing equipment, double-head laser wire stripping machines are becoming a crucial production tool in the new energy vehicle, 5G communications, aerospace, and high-end electronics manufacturing sectors due to their high efficiency, low damage, and ability to accommodate a wide range of wire diameters and complex harnesses. As the electric vehicle, power electronics, and high-speed communications industries continue to demand more precision and processing efficiency, market demand for double-head laser wire stripping machines continues to grow. However, this equipment presents a high technical barrier to entry, resulting in significant production costs and R&D investment. To maintain their competitive edge in the future,

manufacturers must prioritize technology, manufacturing, and service. First, they must increase R&D in laser stripping technology, dual-head synchronous control, and automated and intelligent systems to improve processing accuracy and stability. Second, they must optimize production processes and supply chain management to achieve high-quality mass production and offer differentiated solutions in product modularization and customization. Furthermore, they must strengthen after-sales service and application training to help customers improve production efficiency and user experience. Only by comprehensively focusing on technological innovation, process optimization, market expansion, and customer service can double-head laser wire stripping machine manufacturers secure a favorable position in the rapidly growing high-end wire harness processing market and achieve long-term sustainable development.

The global Double Head Laser Wire Stripping Machine market size was estimated at USD 245.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
