The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double Helix Cone Mixer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Double Helix Cone Mixer will reach 8,868 units, with an average selling price of US\$38,000 per unit. The double-helix conical mixer is a highly efficient, low-energy powder mixing device widely used for processing materials with large specific gravity differences, uneven particle sizes, and high heat sensitivity. Its core structure consists of an inverted conical container housing two asymmetrical spiral mixing shafts, each rotating and revolving.
