Abstracts

The double-hole nasal oxygen cannula is a medical consumable used for oxygen delivery. It consists of two independent hoses, which are inserted into the patient's bilateral nostrils respectively. The ends are connected to an oxygen source (such as an oxygen concentrator or oxygen cylinder) to evenly deliver oxygen through the nasal oxygen outlet. Its design features dual-channel shunt oxygen supply, which improves oxygen utilization and reduces unilateral nasal irritation. It is suitable for patients with chronic obstructive pulmonary disease (COPD), postoperative recovery and hypoxemia. The product is usually made of medical-grade PVC or silicone material, with soft and anti-allergic, adjustable fixed ear hooks and other characteristics. Some models are equipped with a humidifier bottle interface to improve comfort.

The global Double Hole Nasal Oxygen Cannula market size was estimated at USD 426.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
