In 2024, the global production of Double-layer Belt Sorter is approximately 4,000 units, with an average selling price of US\$120,000 per unit. The Double-layer Belt Sorter is an automated sorting device based on image recognition and intelligent algorithms. It uses an upper and lower independent crawler structure for high-precision screening of granular or bulk materials. Its core principle is to capture material images through high-speed industrial cameras, combine them with AI algorithms (such as color, shape, texture, and defect recognition) for real-time analysis, and separate the target materials through pneumatic or mechanical actuators. The double-layer crawler design enables two-stage sorting or parallel sorting, improving processing efficiency and sorting accuracy, and is particularly suitable for fragile, sticky, or irregular materials. This equipment is widely used in industries such as food, mining, and renewable resources, and has the advantages of high throughput, low false detection rate, and customization.

The global Double-layer Belt Sorter market size was estimated at USD 480.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
