Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double-layer Plastic and Double-layer Silicone Release Paper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Double-layer Plastic and Double-layer Silicone Release Paper reached 2.1 billion square meters, with an average selling price of US\$1.25 per square meter. Double-layer Plastic and Double-layer Silicone Release Paper is a high-performance release material made from special base paper, coated with PE film on both sides and silicone oil on both sides. It possesses excellent stiffness, flatness, moisture resistance, tear resistance, and stable peel strength, and is mainly used in optoelectronic materials, lithium battery electrode processing, pressure-sensitive adhesive products, electronic component protective films, and high-cleanliness industrial films. Global total production capacity is approximately 2.8 billion square meters per year, with an average gross profit margin of 16%-24%. Upstream raw materials include high-density wood pulp/base paper, PE resin, silicone oil and its platinum catalyst system, curing agents, masterbatches, and additives; among which, base paper accounts for approximately 50% of the cost structure, PE coating materials account for approximately 22%, and silicone oil systems account for approximately 20%. Downstream consumption consists of approximately 38% for optoelectronic displays and protective films, approximately 26% for lithium battery process films, approximately 20% for high-end pressure-sensitive adhesive products, and approximately 10% for industrial electronic materials. The future lies in upgraded products that are thinner, cleaner, more temperature-resistant, and have lower silicon transfer rates, to adapt to rapidly growing applications such as semiconductor packaging, flexible displays, automotive displays, and structural

adhesive films for power batteries. Demand growth is primarily driven by global smart terminal upgrades, automotive electronics, lithium battery capacity expansion, and accelerated localization of photovoltaic and semiconductor materials. Supply chain opportunities manifest in the substitution of high-end substrates for imports, breakthroughs in the localization of high-stability silicone oil systems, and the continued increasing demand from the optoelectronics and new energy industries for ultra-low defect rates and high-strength release materials.

The global Double-layer Plastic and Double-layer Silicone Release Paper market size was estimated at USD 2626.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
