## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double-layer thermal CTP plate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Double-layer thermal CTP plate is a high-performance printing plate for computer direct platemaking. It adopts a double-layer coating structure (thermosensitive layer + ink-receptive layer) and achieves high-precision image and text imaging through infrared laser exposure. Its core advantages include high resolution (up to 1%-99% dot reproduction), long print run (more than 300,000 prints), and strong chemical resistance. It is suitable for commercial printing, packaging printing and high-end publishing. Compared with traditional PS plates or single-layer CTP plates, it has higher platemaking efficiency and better printing durability, and is suitable for high-speed rotary printing presses.

The global Double-layer thermal CTP plate market size was estimated at USD 1201.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
