Abstracts

Double pass reverse osmosis system refers to equipment that operates in series through a two-stage reverse osmosis system. It is mainly used to improve the purity of water and remove more impurities. The two-stage reverse osmosis system includes the first and second stages of reverse osmosis treatment. After the pH value of the water treated by the first-stage reverse osmosis system is adjusted, it is then sent to the second-stage reverse osmosis system by the second-stage high-pressure pump for treatment, thereby obtaining purer water.

The global Double Pass Reverse Osmosis Systems market size was estimated at USD 765.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
