Abstracts

The Double Shield Tunnel Boring Machine (TBM) is an advanced excavation tool used in tunnel construction projects. Unlike Single Shield TBMs, these machines have two shields, one at the front and another at the rear, which provide enhanced stability and support to the tunnel face during excavation. The cutting head is positioned between these shields, allowing for precise and efficient tunneling through various ground conditions. Double Shield TBMs also feature an integrated conveyor system that removes excavated material from the tunnel. With improved control over ground settlement and reduced risks during excavation, Double Shield TBMs are widely used for large-scale infrastructure projects, such as metro systems, highway tunnels, and water conveyance tunnels.

The global Double Shield Tunnel Boring Machine market size was estimated at USD 1850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
