Abstracts

Double sided coated paper is a specialized printing substrate characterized by a uniform coating applied to both sides of the paper base, which enhances surface smoothness, ink absorption, and color vibrancy. This coating, typically composed of pigments like clay or calcium carbonate combined with binders, creates a superior printing surface that reduces ink bleed and ensures sharp, high-resolution images and text. Commonly available in various weights and finishes?such as matte, gloss, or satin?it is engineered for applications requiring professional-grade print quality on both sides, including brochures, catalogs, high-end magazines, marketing materials, and packaging inserts.
