Double-Sided Cranial Fixation System is a medical device used in neurosurgical procedures to secure and stabilize the skull after cranial bone flap removal or craniotomy. This system typically comprises specialized screws, plates, and adapters that provide rigid fixation and support for the replaced bone or bone graft. The double-sided aspect of the system refers to its ability to provide fixation on both sides of the cranial defect, ensuring stability and proper alignment of the bone flap or graft. The system is designed to promote proper healing, reduce the risk of infection, and protect the underlying brain tissue during the recovery process.
