## Abstracts

A flexible PCB is a kind of printed circuit board, also called a flexible printed circuit, or FPC for short. FPC is made of adhesive material or non-adhesive material. The copper used in the FPC production process is divided into electrolytic copper and rolled copper, and non-stick rolled copper is more flexible and foldable. A double-layer flexible PCB consists of two conductive layers with an insulating layer in between. A double-layer flexible PCB is an ideal product that requires circuit density. According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.

The global Double Sided FPC Coverlay market size was estimated at USD 561.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
