## Abstracts

Double-sided silver reflective film is an optical material with silver reflective layers on both sides of the film. This reflective film usually consists of a support film, a silver reflective layer, an adhesive layer (if necessary), and a possible enhanced reflective layer. It is designed to improve the reflection efficiency of light and reduce light loss, thereby increasing backlight brightness or achieving other optical effects. The reflectivity of double-sided silver reflective film is usually required to be above 96%. Through advanced coating or silver plating processes, the reflectivity can even reach above 97%, or even close to 100%. This high reflectivity property enables double-sided silver reflective film to significantly improve the utilization of light in applications such as backlight modules.

The global Double-sided Silver Reflective Film market size was estimated at USD 594.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
