Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Double Tied Expansion Joint competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Double tied expansion joint consists of two corrugated pipes, but unlike the duplex expansion joint, there is no fixed bracket structure connection between the two corrugated pipes. This allows the universal expansion joint to absorb axial, transverse and angular displacements. Its compensation amount is larger than that of a single-wave expansion joint and is often used to compensate for the displacement that a single-wave expansion joint cannot compensate. The duplex tie rod type expansion joint usually has a tie rod distributed around the expansion joint for a stable connection. In 2024, global Double Tied Expansion Joint production reached approximately 773 k units, with an average global market price of around US\$ 892 per unit.

The global Double Tied Expansion Joint market size was estimated at USD 690.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Double Tied Expansion Joint market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
