Abstracts

Double-walled carbon nanotubes (DWCNTs) belong to the family of one-dimensional materials, similar to single-walled carbon nanotubes. This particular class of carbon nanotube consists of two nanotubes, with one nested within the other. The differences in the diameters of the two nanotubes can produce varying degrees of interaction between the two tubes. This allows for modifications to be made to the outer nanotube without altering the inner nanotube's properties, and results in unique and interesting properties. Additionally, DWCNTs enable a combination of solubility and functionality (which is not possible with single-walled carbon nanotubes).

The global Double Walled Carbon Nanotubes Dwnts market size was estimated at USD 125.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.45% during the forecast period.
