Abstracts

A double-walled incubator is a specialized laboratory device designed to maintain precise and stable temperature, humidity, and atmospheric conditions (such as CO? levels in some models) for the cultivation and growth of biological samples, including cell cultures, microorganisms, plants, and tissues. It features two insulated walls?an inner chamber and an outer shell?separated by an air gap or additional insulating material, which minimizes heat loss, reduces temperature fluctuations caused by ambient changes, and enhances energy efficiency. This design is critical for sensitive applications requiring long-term consistency, such as in pharmaceuticals, biomedical research, food testing, and clinical diagnostics, where even minor environmental deviations can compromise experimental integrity or product viability.

The global Double Walled Incubator market size was estimated at USD 68.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
