Report Overview

Doubling machine is a textile device that combines various types of yarns and winds them into doubling bobbins during the textile process, and provides them to subsequent machines such as double twisters. The doubling frame is usually composed of multiple spindles, each spindle is placed with a roving, and then through auxiliary devices such as guide wheels and tensioners, multiple strands of roving are interwoven to form a spun yarn. There are many methods of doubling used in the collection of yarn doubling machines, such as drum doubling, disk doubling and pressure doubling, etc. The doubling machine has high productivity and can doubling multiple strands of roving at the same time, improving the industrial production level of the yarn.
