## Abstracts

The market for DP 2.0 Retimers and Redrivers encompasses semiconductor components designed to enhance signal integrity in high-speed DisplayPort 2.0 interfaces, which support data rates up to 80 Gbps. These devices address signal degradation caused by channel losses, impedance mismatches, and electromagnetic interference in systems such as gaming monitors, high-resolution displays, professional workstations, and advanced laptops. Retimers perform full signal recovery by reconstructing the clock and data, making them suitable for longer, more lossy channels, while Redrivers simply amplify and equalize signals without full retiming, offering a lower-power, cost-effective solution for shorter interconnects. Demand is driven by the proliferation of 8K and higher refresh rate displays, the growth of gaming and content creation markets, and the increasing adoption of USB4 and Thunderbolt interfaces that share underlying technology with DisplayPort. Key players include semiconductor companies specializing in high-speed data transmission, and competition centers on power efficiency, signal integrity performance, compatibility with evolving standards, and integration with other interface technologies.

The global Dp 2.0 Retimer And Redriver market size was estimated at USD 500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
