Report Overview:

The generation of DPM code is called marking, which means that the machine directly prints, casts or etches the symbols on the parts, and directly marks the 'permanent' symbols on the articles or parts using the process that meets the requirements of manufacturers, suppliers or regulations. There are mainly four methods: laser etching, machine impact, inkjet printing and chemical corrosion. DPM barcode reader is used to scan DPM code to identify its object information.

The advantage of DPM code is that they are permanent and cannot be easily deleted, hidden or damaged. DPM code is also a popular choice for parts with textured surfaces (labels will not be pasted) and very small parts (labels do not fit). Because the DPM code is as long as the part itself, the part can be easily identified throughout its life cycle, also known as 'cradle to grave' traceability.
