Abstracts

Dr Grade Iron Ore Pellets, also known as Direct Reduction (DR) grade pellets, are high-quality, beneficiated iron ore agglomerates specifically manufactured for use in direct reduction ironmaking processes such as MIDREX, HYL, or other gas-based reduction technologies; these pellets typically possess stringent chemical and physical properties, including high iron content (usually above 67% Fe), low levels of impurities (such as silica, alumina, phosphorus, and sulfur), excellent mechanical strength to withstand handling and reduction, and uniform size distribution, making them a critical feedstock for producing high-purity direct reduced iron (DRI) or hot briquetted iron (HBI), which serves as a premium raw material for electric arc furnace (EAF) steel production due to its low residual element content and consistent quality.

The global Dr Grade Iron Ore Pellets market size was estimated at USD 147.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
