## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DR Portable X-ray Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DR (Digital Radiography) portable X-ray systems are advanced, mobile devices used to capture X-ray images for medical or security purposes. Unlike traditional X-ray systems that use film, DR systems employ digital sensors to directly capture and convert X-ray images into digital format, offering higher image quality and faster results. These portable units allow healthcare providers or security personnel to perform X-ray exams in various locations, such as at the bedside, in remote areas, or at security checkpoints. DR portable X-ray systems provide real-time imaging, reducing the need for film development and enabling quicker decision-making and enhanced patient or security outcomes. The DR portable X-ray systems market is mainly driven by the growth of medical and emergency rescue needs and the upgrade of industrial non-destructive testing, and is widely used in hospital examinations, field rescue, and industrial site inspections. Its high mobility, fast imaging, digital transmission, and AI-assisted diagnosis capabilities have significantly improved the efficiency of diagnosis and treatment, especially under conditions of limited resources or complex environments. In the future, with the deep integration of lightweight materials, wireless detectors, and artificial intelligence algorithms, DR portable X-ray systems will develop in the direction of smaller size, intelligence, and high integration, and further expand their applications in emerging fields, becoming an indispensable and efficient tool in the fields of medical and industrial inspection.

The global DR Portable X-ray Systems market size was estimated at USD 237.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20%

during the forecast period.
