Report Overview

Drag reducing agent (DRA) for pipelines, also known as flow improver or pipeline drag reducer, is a chemical additive used to reduce the frictional resistance (drag) between the flowing fluid and the internal walls of a pipeline. When added to the fluid, the DRA forms a thin, temporary layer on the pipeline's inner surface, which alters the fluid's flow characteristics and reduces turbulence. This leads to improved flow efficiency and reduced energy consumption in pipeline transportation systems.
