Abstracts

The draw wire position sensor is a device used to accurately measure linear displacement. It is connected to a moving object through a flexible steel cable (draw rope). As the target object moves, the draw rope is pulled out or retracted, driving the internal precision encoder or potentiometer to rotate, thereby converting mechanical motion into electrical signal output. It has high accuracy, long range and compact design. The sensor has excellent anti-interference ability and environmental adaptability, and can work stably under harsh conditions such as high temperature, low temperature, humidity and vibration. It supports a variety of signal output interfaces, such as analog voltage, current, serial communication, etc., which is easy to integrate with the control system.

The global Draw Wire Position Sensors String Pots market size was estimated at USD 3039.31 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
