## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Drawing Projector for Kids competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of children's drawing projectors was approximately 5 million units, with an average selling price of about \$20 per unit and a gross profit margin of about 45%. Single-line production capacity was approximately 300,000-600,000 units per year. Children's drawing projectors are educational toys that use optical projection to project the outlines of images on transparent slides (or templates) onto drawing paper, helping children easily and accurately trace and draw. The upstream supply chain for children's drawing projectors mainly consists of suppliers of optical lenses, LED light sources, plastic particles, and electronic components; the midstream comprises brand owners and manufacturing plants responsible for product design, optical module assembly, complete machine production, and quality control; and the downstream is sold through online e-commerce, mother and baby toy stores, and stationery and gift channels. The demand stems from families' emphasis on early childhood art education. Parents hope to stimulate their children's interest in drawing and creativity through this interactive tool, viewing it as an educational toy that combines entertainment and learning, thus forming a stable market driven by the "edutainment" consumer philosophy.

The global Drawing Projector for Kids market size was estimated at USD 100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
