Abstracts

In the manufacturing industry, drawing search systems register and manage company drawings in a database, enabling quick retrieval based on past data. These systems are predominantly used in sales, design, and procurement departments to streamline the extraction of past drawings. Recent advancements incorporate AI technology, making these systems simpler, more accurate, and user-friendly for searching reference and similar drawings. Typically, a drawing search system consists of a PC and a database (DB) server or cloud storage. By entering master data such as customer, product, quotation information, and prices during the drawing import process, AI learns from past data, allowing multifaceted immediate searches and significant operational improvements. Many companies still rely on paper-based drawing storage, leading to issues like lost or bulky drawings that are difficult to locate. Drawing search systems address these challenges.

The global Drawing Search System market size was estimated at USD 182.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.70% during the forecast period.
