## Abstracts

Dried backpacking meals are a type of convenient food designed for hiking, camping or long-distance travel. They remove moisture from food through a dehydration process, thereby reducing weight and volume, making them easier to carry and store. This type of meal usually uses low-temperature dehydration technology to remove moisture from the food during the production process to retain its nutrients and flavor. When using it, just add hot water or directly add hot water to the food bag, and it can be eaten in a few minutes, which is very convenient. Dried backpacking meals usually contain high calories, rich protein, carbohydrates, and essential vitamins and minerals, which can meet the energy needs of long-term outdoor activities.
