Abstracts

Pea protein is a high-purity protein that is quenched from peas using low temperature and low pressure technology. Pea protein contains all the amino acids necessary for the human body. It is a complete protein and is a good choice for vegetarians to add protein. Pea protein is divided into dry pea protein and wet pea protein according to form. Pea powder extracted in powder form is dry pea protein, and the dry pea protein occupies a dominant position in the market. Compared to conventional protein sources, textured dried pea protein is relatively sustainable and provides enhanced functionality, increasing its range of applications. The global dried pea protein market has been experiencing significant growth in recent years, driven by factors such as increasing consumer demand for plant-based proteins, rising awareness about the health benefits of pea protein, and growing adoption of vegetarian and vegan diets. North America and Europe have traditionally been the largest markets for dried pea protein due to higher consumer awareness and adoption of plant-based diets in these regions. However, the market is also expanding in Asia Pacific, Latin America, and other regions as consumer preferences shift towards healthier and sustainable food options. The food and beverage industry is the major end-use segment for dried pea protein, accounting for the highest market share. Dried pea protein is utilized in various applications, including protein powders and bars, plant-based meat alternatives, bakery products, snacks, and beverages. Key market players in the global dried pea protein market include Roquette Frères, Ingredion, DuPont, Puris Foods, Axiom Foods, Emsland Group, and Cosucra Group, among others. These companies are focusing on product development, expanding their production capacities, and forming strategic partnerships to meet the growing demand for dried pea protein worldwide. Overall, the global dried pea protein market is expected to witness robust growth in the coming years, driven by the rising demand for plant-based proteins and the continued development of pea protein products suitable for various applications.

The global Dried Pea Protein market size was estimated at USD 1487.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.
