Report Overview:

A drift control agent is a type of surfactant used in agriculture to reduce the amount of spray drift when applying pesticides or fertilizers to crops. It helps to keep the droplets of spray close to the target area, reducing the risk of them being blown off course by wind or evaporation and potentially damaging nearby plants or areas not intended for treatment. Drift control agents work by modifying the surface tension of water-based solutions, allowing them to spread evenly over leaves without excessive atomization or dispersion.

The Global Drift Control Agent Market Size was estimated at USD 797.71 million in 2023 and is projected to reach USD 1026.95 million by 2029, exhibiting a CAGR of 4.30% during the forecast period.
