## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Drilling Mud Cooler competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A drilling mud cooler is a specialized device used in high-temperature, high-pressure operations such as oil, natural gas, and geothermal drilling. It is primarily used to rapidly cool circulating drilling fluid. Its core function is to rapidly cool high-temperature mud to an appropriate temperature through components such as a fan, spray system, and circulating heat dissipation system. This maintains mud stability and prevents high-temperature-induced tool aging, mud degradation, and downhole accidents. In 2024, global drilling mud cooler production reached approximately 120,000 units, with an average global market price of around \$3,000 per unit.
