The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Drilling Mud Lubricants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of drilling mud lubricants reached 420,000 tons, with an average selling price of \$1,650 per ton. Drilling mud lubricants are a type of chemical additive used to reduce friction between the drill bit and the wellbore wall and drill string, significantly improving drilling efficiency and extending drill tool life. Upstream raw materials include mineral oil, vegetable oil, polyether surfactants, and ester compounds, with representative raw material suppliers including BASF, Dow Chemical, Shell, and Saudi Aramco. Downstream services primarily serve oil and gas exploration, shale gas development, and deep-sea drilling, with typical customers including CNPC, Sinopec, ExxonMobil, and Chevron. In the future, with the increase in unconventional energy development and deepwater drilling operations, demand for environmentally friendly, water-based, and biodegradable lubricants will grow rapidly. High-performance nano-lubricants and intelligent drilling fluid systems are expected to become the direction of industry innovation.
