Abstracts

The Rotary Control Device (RCD) is the most critical and important well control equipment in the onshore and offshore drilling environment of the oil field. It is usually used in underbalanced drilling/UBD, managed pressure drilling/MPD methods, pressurized mud cap drying (PMCD), constant bottom hole pressure (CBHP), return flow control (RFC) and other pressure drilling operations. The Rotary Control Device (RCD) is usually installed on the top of the annular blowout preventer (annular BOP) or the ram BOP (ram BOP). The main function of the Rotary Control Device Rcd is to seal around the rotating drill pipe, tool joints, and can more safely submerge the well fluid to the surface, and is used to divert the return flow to the drainage line, drainage line or throttling manifold. The rotary control device (RCD) is mainly composed of a rotary bearing assembly, a housing, a hydraulic power unit control room, control pipelines, hydraulic gate valves, plug valves, etc.

The global Drilling Rotation Control Device market size was estimated at USD 381.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
