Driver Assisting Systems (DAS) are a suite of advanced electronic technologies integrated into vehicles to enhance driver safety, comfort, and control by automating, improving, or adapting specific driving functions. These systems utilize a combination of sensors?such as cameras, radar, lidar, and ultrasonic detectors?along with sophisticated software algorithms to monitor the vehicle's surroundings, interpret data in real-time, and either provide warnings to the driver or actively intervene in vehicle operation. Key functionalities of DAS include adaptive cruise control, lane-keeping assistance, automatic emergency braking, blind-spot detection, parking assistance, and traffic sign recognition, all aimed at reducing human error, mitigating collision risks, and supporting the driver in various driving scenarios. As a critical intermediate step toward fully autonomous vehicles, DAS represents the practical application of automation in modern automobiles, balancing human oversight with machine assistance to improve overall road safety and driving efficiency.
