Abstracts

Driver Feedback Signs (DFS) are dynamic, radar-based electronic traffic control devices designed to monitor and display real-time vehicle speeds to motorists, typically through highly visible LED signs installed along roadways. These systems utilize Doppler radar or laser technology to detect approaching vehicles, calculate their instantaneous speed, and present this information?often accompanied by advisory messages like "Slow Down" or speed limit reminders?to promote safer driving behaviors by making drivers consciously aware of their speed relative to posted limits. DFS units are commonly deployed in school zones, residential areas, construction sites, and high-risk corridors where reducing speeding and enhancing traffic safety are priorities, and they may operate continuously or be activated by triggers such as vehicle approach or time-of-day scheduling.
