Abstracts

A driver override system, also known as a collision avoidance system or autonomous emergency braking, is an advanced automotive safety technology designed to intervene when the driver fails to respond to an imminent collision. It utilizes a combination of sensors, cameras, radar, and LiDAR to monitor the vehicle's surroundings, detect potential obstacles such as other vehicles, pedestrians, or stationary objects and automatically applies the brakes or adjusts steering if the driver does not take corrective action in time. These systems are engineered to supplement human reaction, reduce the severity of accidents, or prevent them entirely, and are increasingly integrated with broader advanced driver-assistance systems (ADAS) and autonomous driving platforms.

The global Driver Override Systems market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
