Thermoplastic Composites for Airbag Covers and Housings are advanced materials used in the automotive industry to manufacture components such as airbag covers (also known as airbag doors) and housings. These materials combine the benefits of thermoplastics (e.g., lightweight, flexibility, and recyclability) with the strength and durability of composite reinforcements (e.g., glass fibers or carbon fibers). They are designed to meet the stringent safety, performance, and aesthetic requirements of modern vehicles. A driver airbag, also known as a driver-side airbag or steering wheel airbag, is a safety device in automobiles that is designed to protect the driver in the event of a collision or impact. It is part of the supplemental restraint system (SRS) and is typically located in the center of the steering wheel.

The global Driver-side Airbag Covers Material market size was estimated at USD 116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
