## Abstracts

Drometrizole Trisiloxane, also known by its trade name Mexoryl XL, is a chemical compound used in sunscreens and other skincare products as a broad-spectrum UV filter. It belongs to the class of chemicals known as organic or chemical UV filters, which are used to absorb or scatter ultraviolet (UV) radiation from the sun to protect the skin from damage caused by UV rays. Drometrizole Trisiloxane is particularly effective at absorbing both UVA and UVB rays, which are the two main types of UV radiation. UVA rays contribute to premature skin aging and can penetrate deeper into the skin, while UVB rays are responsible for causing sunburn and can damage the outer layers of the skin. By offering protection against both UVA and UVB radiation, Drometrizole Trisiloxane helps prevent sunburn, skin aging, and the potential development of skin cancer.

The global Drometrizole Trisiloxane market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
