## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Drone in a Box System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Drone in a box system is a self-contained station designed to house, charge, protect, and manage drones without requiring human intervention. Equipped with automated landing guidance, recharging or battery-swapping systems, environmental protection (against dust, rain, or extreme temperatures), and secure data connectivity, these hangars allow drones to be deployed, recovered, and maintained remotely. They serve as key infrastructure for applications such as aerial surveillance, industrial inspection, agriculture, and logistics, enabling drones to operate continuously or on-demand over extended periods while minimizing operational downtime and labor costs. The product costs between \$10,000 and \$40,000, and approximately 2,000 units are produced each year. The upstream of drone in a box system includes advanced hardware and software inputs such as robotics, automated charging or battery-swapping systems, precision landing sensors, climate-controlled enclosures, and cloud-based fleet management platforms. These rely on suppliers of drone components, batteries, IoT devices, materials for weatherproof housing, and AI/automation technologies. The downstream consists of end users and applications that deploy hangars as part of larger operational ecosystems?ranging from security and defense agencies using them for perimeter surveillance, to energy and utility companies for pipeline and powerline inspection, to agriculture, logistics, and smart-city operators that require scalable, continuous drone operations. Distribution channels often involve direct sales to enterprises, integration into turnkey drone-as-a-service solutions, or partnerships with drone manufacturers and service providers.

The global Drone in a Box System market size was estimated at USD 58.65 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
