Abstracts

Drone Show Software refers to a specialized professional software system designed for organizing and executing drone swarm performances, which is mainly used to command multiple drones to collaboratively complete complex flight formations, light changes and other actions in the air so as to present preset visual effects. It is the core control hub of drone light shows and other aerial performances, integrating functions such as creative design, flight control, safety monitoring and effect synchronization. Geographically, North America currently holds the largest market share, accounting for 38%, followed by Europe with 26% and the Asia-Pacific region with 24%. In China, the market also shows obvious regional characteristics. Eastern coastal cities such as Shanghai, Shenzhen, and Hangzhou have become core development areas due to their strong economic strength and high market demand. Meanwhile, the central and western regions are accelerating their development relying on policy support and cultural resource advantages, and it is expected to form a tripartite competitive pattern with the eastern region by 2030. In addition, India is expected to achieve the highest compound annual growth rate in the drone-related software market from 2024 to 2030, becoming a new growth point in the Asia-Pacific region. AI has become a core driving force for the upgrading of drone show software. More than 63% of commercial drone fleets have applied AI-powered navigation and obstacle avoidance systems. AI algorithms can decompose complex performance choreographies into precise flight parameters, and enable real-time adjustments according to environmental changes such as wind speed and light during performances, realizing more complicated formation transformations. For example, the software can automatically adjust the flight path of the drone group when encountering sudden weather changes to ensure the smooth progress of the performance.

The global Drone Show Software market size was estimated at USD 186.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.30% during the forecast period.
