Abstracts

Drone software is a collection of digital tools used to control, manage and optimize unmanned aerial vehicle (UAV) flight missions. It includes not only flight control systems, but also mission planning, data acquisition, image processing, navigation, compliance management, remote monitoring and other functions. Modern drone software is usually deployed in the cloud, ground control stations or directly integrated into drone hardware, supporting automated flight, real-time data analysis and multi-machine collaborative operations. With the integration of AI, edge computing and 5G technologies, drone software is gradually evolving into an intelligent platform and becoming the core driving force for the development of the drone industry. The drone software market is in the stage of accelerated development of intelligence. The trend of technological integration is obvious, and cutting-edge technologies such as AI, edge computing and 5G continue to improve the automation and data processing capabilities of software. The industry has a strong demand for customized solutions, which has spawned specialized software platforms in the fields of agriculture and security. At the same time, the open source ecosystem promotes innovation, but corporate users prefer closed-source systems to improve security and service assurance. With the strengthening of global supervision, compliance management functions have become the core threshold of software; and the popularity of the SaaS subscription model has also reduced the deployment cost of enterprises. In the future, market competition will shift from basic flight performance to mission understanding and data intelligence drive, gradually moving towards a new stage of "flying well". Drone software is mainly used in the fields of construction, agriculture and mining, especially in the construction industry, and is expected to continue to expand its share. The global market is showing a rapid growth trend, the prospects are very optimistic, and it has attracted a large number of emerging companies to enter the track. The North American market has always been in a dominant position and will continue to lead in the future, followed by Europe. The

United States has strong strength in software research and development, is the main development site, and has a large number of leading companies.

The global Drone Software market size was estimated at USD 770.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.00% during the forecast period.
