## Abstracts

Drone tethering system is a solution that connects the ground power supply system with the UAV through an optoelectronic composite cable, enabling the UAV to obtain continuous energy support and facilitating functions such as data transmission. It typically consists of a ground high-voltage direct current (HVDC) stabilized power supply system, a cable reel, a synchronous winding reel, a tethered cable, an aerial voltage stabilizer module, a backup battery, and other components. The core of this system lies in the transmission of power through the tethered cable, which breaks through the endurance limitations of traditional UAVs that rely solely on battery power, allowing the UAV to hover or perform tasks in the air for extended periods. Depending on actual needs, it can carry various payload equipment such as communication relay devices, gimbal cameras, lighting systems, and more.

The global Drone Tethering Systems market size was estimated at USD 47.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
