Abstracts

A Drop Bottom Quench Furnace is a specialized industrial heat treatment system designed for processes such as hardening, tempering, and annealing, where components are heated to precise temperatures in a sealed chamber and then rapidly quenched by lowering the entire load into an integrated oil or polymer quench tank located directly beneath the furnace; this design minimizes exposure to air during transfer, reducing oxidation, ensuring uniform cooling, and improving metallurgical properties, making it particularly suitable for high-volume production of parts like gears, shafts, and tools that require consistent, repeatable heat treatment with minimal distortion.
