Abstracts

Drop forging is a kind of forging process different from press forging, upset forging or other forging processes. Metal shaping process in which a hot piece of metal is hammered (forged) between the stationary part and the moving (dropping) part of a two-piece hollow metal die (called forging die) in one or several operations. Employed usually in manufacturing axles, crankshafts, gears, and tools. In drop forging, the billet is deformed into desired shapes with the help of forging dies. Types of drop forging are open-die drop forging and closed-die drop forging. The shape of the die is the main differences between open die drop forging and closed die drop forging like the names. Closed die drop forging does fully encloses the workpiece, while open die forging does not. The global drop forging market is expected to continue to grow in the coming years due to increasing demand from various end-use industries, including automotive and aerospace. Drop forging is a metalworking process used to shape metal parts by hammering or pressing hot metal into the desired shape.
