Abstracts

A drop-in gas range is a gas range that is fixedly installed on a kitchen countertop or in a cabinet. It usually uses natural gas or liquefied petroleum gas (LPG) as fuel and generates an open flame for heating. It has the characteristics of precise fire control, efficient heating and instant response, and is widely used in home and professional kitchens. The embedded design allows it to blend in with the overall style of the kitchen, and is usually paired with a stovetop made of stainless steel, glass or enamel to enhance durability and ease of cleaning. This type of gas range usually includes safety features such as multi-burner configuration (double-ring fire, triple-ring fire, etc.), automatic ignition system, flameout protection device, etc. to improve ease of use and safety. Compared with electric stoves, drop-in gas stoves are more suitable for scenarios that require strong firepower, fast heating and flexible cooking, and are particularly popular in the Asian and American markets.

The global Drop-In Gas Range market size was estimated at USD 397.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
