Abstracts

Drug ball mill is a kind of grinding equipment specially used in the pharmaceutical industry. It uses the rolling, sliding or throwing action of the ball in the mill cylinder to achieve fine grinding of drug raw materials through impact and friction. This mechanism can effectively reduce the particle size and improve the solubility and bioavailability of the drug. Both dry and wet grinding are supported to suit different drug formulations and process requirements. Wet grinding is particularly suitable for preventing dust from flying and improving grinding efficiency. Drug ball mill is an important basic equipment in the pharmaceutical industry. It not only plays a role in the process of drug development and preparation, but also is an indispensable equipment in small-scale trials and large-scale production. By precisely controlling the grinding process, drug ball mills help to improve the quality and efficacy of drugs.

The global Drug Ball Mill market size was estimated at USD 908.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
