Report Overview

Drug Eluting Balloons (DEBs) are specialized medical devices used in interventional cardiology and peripheral vascular procedures to treat narrowed or blocked arteries. These balloons are coated with anti-proliferative drugs, such as paclitaxel or sirolimus, which are released upon inflation to prevent restenosis (re-narrowing of the artery) by inhibiting cell proliferation. Unlike Drug Eluting Stents (DES), DEBs leave no permanent implant, making them particularly useful in small vessels, bifurcations, or lesions where stenting is challenging. The market for DEBs has grown significantly due to rising prevalence of cardiovascular diseases, increasing demand for minimally invasive procedures, and technological advancements enhancing drug delivery efficiency. However, adoption varies by region, influenced by regulatory approvals, reimbursement policies, and physician preference. While Europe leads in usage due to early approvals and strong clinical evidence, North America and Asia-Pacific are catching up with expanding indications and emerging local manufacturers. Despite competition from DES and plain balloon angioplasty, DEBs are gaining traction in niche applications, supported by studies demonstrating their efficacy in reducing repeat interventions. Pricing pressures and stringent regulatory hurdles remain key challenges, but innovation in drug coatings and balloon materials is expected to drive future growth.

The global Drug Eluting Balloons DEB market size was estimated at USD 742.66 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 13.23% during the forecast period.
