## Abstracts

A dry air dryer is a device used to remove moisture or humidity from the air. It is commonly used in industrial and commercial settings where dry air is required for various processes or applications. The dryer works by passing the air through a desiccant material, such as silica gel or activated alumina, which absorbs the moisture present in the air. This process helps to reduce the dew point of the air, preventing condensation and ensuring a dry environment. Dry air dryers are used in industries such as manufacturing, food processing, pharmaceuticals, electronics, and many others.

The global Dry Air Dryer market size was estimated at USD 6133.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
